## PAPER - 5: ADVANCED MANAGEMENT ACCOUNTING QUESTIONS

## CVP Analysis

1. The profit for the year of Garena Ltd. works out to $12.5 \%$ of the capital employed and the relevant figures are as under:
Sales.
₹5,00,000
Direct Materials ₹ $2,50,000$
Direct Labour .₹ 1,00,000
Variable Overheads ₹ 40,000
Capital Employed ₹ $4,00,000$

The new Sales Manager who has joined the company recently estimates for next year a profit of about $23 \%$ on capital employed, provided the volume of sales is increased by $10 \%$ and simultaneously there is an increase in Selling Price of $4 \%$ and an overall cost reduction in all the elements of cost by $2 \%$.

## Required

Find out by computing in detail the cost and profit for next year, whether the proposal of Sales Manager can be adopted.

## Decision Making

2. A company produces three products ( $X, Y$ and $Z$ ). Extracts from the original budget for December 2019 are shown below:

|  | X | Y | Z |
| :--- | :---: | :---: | :---: |
| Sellling price (₹ per unit) | 24 | 41 | 44 |
| Total cost (₹ per unit) | 20 | 20 | 35 |
| Labour hours per unit | 0.5 | 1.5 | 1.5 |
| Machine hours per unit | 1 | 2 | 0.75 |
| Production and sales (units) | 10,000 | 6,000 | 10,000 |

Variable costs are $40 \%$ of the total cost of each unit.
Fixed costs are absorbed at the rate of $150 \%$ of variable costs based on the budgeted production quantities as shown above.

It has now become known that during December 2019 essential maintenance work will have to be carried out. This will limit the availability of resources to

Labour Hours: 12,500 hours
Machine Hours: 30,000 hours

## Required

Produce, using marginal costing principles, profit maximising production plan for December 2019 and the resulting profit or loss.

## Decision Making

3. JCL Limited, a manufacturing company has three divisions: J, C and L. The company's all divisions are not performing well. Company wants to evaluate the potential closure of division "L". The cost and revenue information is given below:

|  | Division J and C (₹) | Division L (₹) | Total (₹) |
| :--- | :---: | :---: | :---: |
| Sales | $1,70,000$ | 24,000 | $1,94,000$ |
| Variable Cost | 88,400 | 14,400 | $1,02,800$ |
| Contribution Margin | 81,600 | 9,600 | 91,200 |
| Traceable Fixed Cost | 66,000 | 12,200 | 78,200 |
| Divisional Profit | 15,600 | $-2,600$ | 13,000 |
| Un-allocated fixed cost |  |  | 5,000 |
| Income before tax |  |  | 8,000 |

## Required

Calculate the increase or decrease in the profit after closure of division L if all traceable fixed cost of division $L$ are avoidable. Should the division $L$ be closed?
Assume that traceable fixed cost of division "L" having $50 \%$ of staff salary can be reassigned to other divisions. What is the effect of closure of division $L$ with this assumption?

## Cost Plus/ Mark-up Pricing

4. JTC Ltd. is specialists in the manufacture of sports goods. They manufacture croquet mallets but purchase the wooden balls, iron arches and stakes required to complete a croquet set.
Mallets consist of a head and handle. Handles use 2.5 board feet per handle at ₹ 50 per board foot. Spoilage loss is negligible for the manufacture of handles. Heads frequently split and create considerable scrap.
A head requires 0.40 board feet of high quality lumber costing ₹ 60 per board foot. Spoilage normally works out to $20 \%$ of the completed heads. $4 \%$ of the spoiled heads can be salvaged and sold as scrap at ₹ 10 per spoiled head.
In the department machining and assembling the mallets, 6 men work 8 hours per day for 25 days in a month. Each worker can machine and assemble 12 mallets per uninterrupted 40 minutes time frame. In each 8 hours working day, 15 minutes are

#### Abstract

allowed for coffee-break, 8 minutes on an average for training and 9 minutes for supervisory instructions. Besides $10 \%$ of each day is booked as idle time to cover checking in and checking out changing operations, getting materials and other miscellaneous matters. Workers are paid at a comprehensive rate of ₹ 6 per hour.

The department is geared to produce 20,000 mallets per month and the monthly expenses of the department are as under:

(₹)
Finishing and painting of the mallets...............................20,000
Lubricating oil for cutting machines..................................... 600
Depreciation for cutting machine..................................... 1,400
Repairs and maintenance................................................ 200
Power to run the machines................................................ 400
Plant Manager's salary..................................................9,400
Other overheads allocated to the department................... 60,000

## Required

As the mallets are machined and assembled in lots of 250 , prepare a total cost sheet for one lot and advise the management on the selling price to be fixed per mallet in order to ensure a minimum $33.33 \%$ margin on the selling price.

## Return on Investment Pricing

5. The cost of production and sales of 80,000 units per annum of product 'l' are:

| Material.......................... ₹ $4,80,000$ | Labour.................. ₹ $1,60,000$ |
| :--- | :--- |
| Variable Overhead.......... ₹ $3,20,000$ | Fixed overhead...... ₹ $5,00,000$ |

The fixed portion of capital employed is ₹ 12 lacs and the varying portion is $50 \%$ of sales turnover.

## Required

Determine the selling price per unit to earn a return of $12 \%$ net on capital employed (net of Tax @ 40\%).

## Budget - Ratio

6. Calculate from the following figures:
(i) Efficiency ratio,
(ii) Activity, Ratio and
(iii) Capacity Ratio:

Budgeted Production 528 units

Standard Hours per unit............ 10
Actual Production.................... 450 units
Actual Working Hours.............. 6,000

## Customer Profitability Analysis

7. ABC Ltd., a manufacturer of sports goods, operates its entire business through its three customers i.e. Customer X, a retailer and Customer Y and Customer Z, who are wholesalers. ABC Ltd. prices its products at variable unit cost plus $20 \%$.

Details of the company's customers ( $\mathrm{X}, \mathrm{Y}$ and Z ) for the previous period are as follows:

| Item | Customer X <br> (Retailer) | Customer Y <br> (Wholesaler) | Customer Z <br> (Wholesaler) | Activity <br> Rate |
| :--- | :---: | :---: | :---: | :---: |
| Order fulfilled <br> (at variable cost plus 20\%) | 4 <br> (each of <br> $₹ 37,500$ ) | 12 <br> (each of <br> $₹ 2,12,500)$ | 3 <br> (each of <br> $₹ 4,00,000)$ | $₹ 600$ |
| Discount allowed <br> (on order value) | $5 \%$ | $12.5 \%$ | $12 \%$ | - |
| Regular Deliveries Made | 4 | 0 | 3 | $₹ 250$ |
| Expedited Deliveries | 2 | 0 | 2 | $₹ 750$ |

Customer Y is given a $12.5 \%$ discount (instead of $12 \%$ usually given to wholesalers) for collecting the goods using its own transport.

## Required

Present a customer profitability statement. Comment on the special discount to Y .

## Linear Programming

8. Cake company produces three types of cakes - X, Y, and Z. It uses cream and flour as raw material of which $7,000 \mathrm{~kg}$ and $9,000 \mathrm{~kg}$ respectively are available. The raw material requirements per box of cake are given below:

|  | Requirement (kg/box) |  |  |
| :--- | :---: | :---: | :---: |
| Raw Material | X | Y | Z |
| Cream | 3 | 4 | 5 |
| Flour | 5 | 3 | 5 |

The preparation time for each box of Cake $X$ is three times that of Cake $Y$ and 6 times that of Cake $Z$. The entire time of the firm can produce the equivalent of 5,000 boxes of cake X . The minimum production of $\mathrm{X}, \mathrm{Y}$ and Z are 800,950 and 900 boxes respectively.

Also, the ratios of the number of boxes produced of $X$ and $Y$ must be equal to 2:3. The profits per box of $X, Y$ and $Z$ are $₹ 1,000$, ₹ 800 and $₹ 600$ respectively

## Required

Formulate the problem (no need to solve) as a liner programming model in order to maximize profit.
Present constraints with co-efficient of variables as minimum whole number values.

## Assignment Problem - Minimisation

9. A factory is going to modify of a plant layout to install four new machines $X_{1}, X_{2}, X_{3}$ and $X_{4}$. There are 5 vacant places $P, Q, R, S$ and $T$ available. Because of limited space machine $X_{2}$ cannot be placed at $R$ and $X_{3}$ cannot be placed at $P$. The cost of locating machine to place in Rupees is shown below:
(₹)

|  | $\mathbf{P}$ | $\mathbf{Q}$ | $\mathbf{R}$ | $\mathbf{S}$ | $\mathbf{T}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{X}_{\mathbf{1}}$ | 9 | 11 | 15 | 10 | 11 |
| $\mathbf{X}_{2}$ | 12 | 9 | -- | 10 | 9 |
| $\mathbf{X}_{3}$ | -- | 11 | 14 | 11 | 7 |
| $\mathbf{X}_{4}$ | 14 | 8 | 12 | 7 | 8 |

## Required

Determine the optimal assignment schedule in such a manner that the total costs are kept at a minimum.

## PERT/ CPM

10. The following table gives the activities in a construction project and the time duration of each activity:

| Activity | Predecessors | Normal Time (Days) |
| :---: | :---: | :---: |
| A | --- | 16 |
| B | --- | 20 |
| C | A | 8 |
| D | A | 10 |
| E | B,C | 6 |
| F | D,E | 12 |

## Required

(i) Draw the activity network of the project.
(ii) Find critical path.
(iii) Find the total float and free-float for each activity.

## Simulation

11. Finance Controller of Dunk Limited has drawn the following projections with probability distribution:

| Raw Material |  |  <br> Other Variable Overheads |  | Sales |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $₹$ in '000 | Probability | $₹$ in 000 | Probability | $₹$ in 000 | Probability |
| $08-10$ | 0.2 | $11-13$ | 0.3 | $34-38$ | 0.1 |
| $10-12$ | 0.3 | $13-15$ | 0.5 | $38-42$ | 0.3 |
| $12-14$ | 0.3 | $15-17$ | 0.2 | $42-46$ | 0.4 |
| $14-16$ | 0.2 |  |  | $46-50$ | 0.2 |

Opening cash balance is ₹ 40,000 and fixed cost is estimated at ₹ 15,000 per month.

## Required

Simulate cash flow projection and expected cash balance at the end of the sixth month. Use the following single digit random numbers.

| Raw Material | 431046 |
| :--- | :--- |
| Wages \& Other Variable Overheads | 279189 |
| Sales | 066028 |

## Learning Curve

12. The Crocodile Ltd. makes mementos for offering chief guests and other dignitaries at functions. A customer wants 4 identical pieces of hand-crafted gifts for 4 dignitaries invited to its function.
For this product, Company estimates the following costs for the 1st unit of the product.

| Particulars of Costs | ₹ / unit |
| :--- | :---: |
| Direct Variable Costs (excluding labour) | 1,000 |
| Direct Labour (20 hours @ ₹ 25 hour) | 500 |

$90 \%$ learning curve ratio is applicable and one labourer works for one customer's order.

## Required

(i) What is the price per piece to be quoted for this customer if the targeted contribution is ₹ 750 per unit?
(ii) If 4 different labourers made the 4 products simultaneously to ensure faster delivery to the customer, can the price at (i) above be quoted? Why?
13. West Wood Appliances Ltd. (WWAL) manufactures consumer durable products in a very highly competitive market. WWAL is considering launching a new product ' $W$ - 9 ' into the market and gathered the following data:
Expected Market Price- ₹ 5,000 per unit
Direct Material Cost- ₹ 1,850 per unit
Direct Labour Cost- ₹ 80 per hour
Variable Overhead Cost- ₹ 1,000 per unit
Packing Machine Cost (specially to be purchased for this product)- $₹ 5,00,000$
WWAL expects the selling price for the new product will continue throughout the product's life and a total of 1,000 units can be sold over the entire lifetime of the product.

Direct labour costs are expected to reduce as the volume of output increases due to the effects of $80 \%$ learning curve (index is -0.3219 ). The expected time to be taken for the first unit is 30 hours and the learning effect is expected to end after 250 units have been produced. Units produced after first 250 units will take the same time as the $250^{\text {th }}$ unit.

## Required

(i) Calculate the expected total labour hours over the life time of the product 'W-9'.
(ii) Profitability of product ' $W$-9' that WWAL will earn over the life time of the product.
(iii) Average target labour cost per unit over the life time of the product if WWAL requires average profit of ₹ 800 per unit, to achieve its long term objectives.
Note: $250-0.3219=0.1691,249-0.3219=0.1693$

## Miscellaneous

14. Some statements are given below. Identify name of the cost with examples and state whether it is relevant/ non relevant in decision making.
(i) Costs are historical costs which have already been incurred and can not change by any decision made in future.
(ii) It is measure of benefits foregone by rejecting the second-best alternative of resources in favour of the best.
(iii) It is portioning of cost which involves payments to outsiders i.e. it gives rise to cash expenditure as opposed to such costs as depreciation.
(iv) Total cost is changed (increase or decrease) due to change in the level of activity, technology or production process or method of production.
(v) Cost used in evaluation of a product to reflect the use of resources but that have no observable cost.
15. State the appropriate pricing policy in each of the following independent situations:
(i) 'W' is a new product for the company and the market and meant for large scale production and long term survival in the market. Demand is expected to be elastic.
(ii) ' X ' is a new product for the company, but not for the market. B's success is crucial for the company's survival in the long term.
(iii) ' $Y$ ' is a new product to the company and the market. It has an inelastic market. There needs to be an assured profit to cover high initial costs and the usual sources of capital have uncertainties blocking them.
(iv) 'Z' is a perishable item, with more than $80 \%$ of its shelf life over.
16. Classify the following measures under appropriate categories in a Balanced Scorecard for a banking company which excels in its home loan products:
(i) A new product related to life insurance is being considered for a tie up with the successful housing loan disbursements.
e.g. every housing loan applicant to be advised to take a life policy or compelled to take a fire insurance policy.
(ii) How different sectors of housing loans with different interest rates have been sanctioned, their volumes of growth in the past 4 quarters.
(iii) How many days are taken to service a loan, how many loans have taken longer, what additional loans are to be released soon, etc.

## SUGGESTED ANSWERS/HINTS

1. 

Statement Showing "Cost and Profit for the Next Year"

| Particulars | Existing <br> Volume, etc. | Volume, Costs, etc. <br> after 10\% Increase | Estimated Sale, <br> Cost, Profit, etc.* |
| :--- | ---: | ---: | ---: |
|  | $(₹)$ | $(₹)$ | $(₹)$ |
| Sale | $5,00,000$ | $5,50,000$ | $5,72,000$ |
| Less: Direct Materials | $2,50,000$ | $2,75,000$ | $2,69,500$ |
| Direct Labour | $1,00,000$ | $1,10,000$ | $1,07,800$ |
| Variable Overheads | 40,000 | 44,000 | 43,120 |
| Contribution | $1,10,000$ | $1,21,000$ | $1,51,580$ |
| Less: Fixed Cost ${ }^{\#}$ | 60,000 | 60,000 | 58,800 |
| Profit | 50,000 | 61,000 | 92,780 |

(*) for the next year after increase in selling price @ 4\% and overall cost reduction by $2 \%$.
$\mathbf{(}^{(\#)}$ Fixed Cost $=$ Existing Sales - Existing Marginal Cost - 12.5\% on ₹4,00,000
$=₹ 5,00,000-₹ 3,90,000-₹ 50,000$
$=₹ 60,000$
Percentage Profit on Capital Employed equals to $23.19 \%\left(\frac{₹ 92,780}{₹ 4,00,000} \times 100\right)$
Since the Profit of ₹ 92,780 is more than $23 \%$ of capital employed, the proposal of the Sales Manager can be adopted.
2.

|  | $\mathbf{X}$ | $\mathbf{Y}$ | $\mathbf{Z}$ | Total | Available |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Labour hours per unit | 0.50 | 1.5 | 1.5 |  |  |
| Machine hours per unit | 1 | 2 | 0.75 |  |  |
| Production and sales (units) | 10,000 | 6,000 | 10,000 |  |  |
| Labour hours needed for budget | 5,000 | 9,000 | 15,000 | 29,000 | 12,500 |
| Machine hours needed for budget | 10,000 | 12,000 | 7,500 | 29,500 | 30,000 |

|  | $\mathbf{X}$ | Y | Z |
| :--- | :---: | :---: | :---: |
| Selling price (per unit) | 24 | 41 | 44 |
| Variable cost (per unit) | 8 | 8 | 14 |
| Contribution per unit | 16 | 33 | 30 |
| Labour hours (per unit) | 0.5 | 1.5 | 1.5 |
| Contribution per labour hour | 32 | 22 | 20 |
| Rank | 1 st | 2 nd | $3^{\text {rd }}$ |

Available labour hours are 12,500, so company production plan would be

| Product | Production | Hours | Balance |
| :---: | :---: | :---: | :---: |
| X | 10,000 | 5,000 | 7,500 |
| Y | 5,000 | 7,500 | NIL |

## Profitability Statement

|  | $\mathbf{X}$ | $\mathbf{Y}$ | Total |
| :--- | :---: | :---: | :---: |
| Output (units) | 10,000 | 5,000 |  |
| Revenue | $2,40,000$ | $2,05,000$ | $4,45,000$ |
| Variable costs | 80,000 | 40,000 | $1,20,000$ |
| Contribution | $1,60,000$ | $1,65,0000$ | $3,25,000$ |
| Less: Fixed Costs* |  |  | $4,02,000$ |
| Loss |  |  | $(77,000)$ |

- Fixed Cost is $(10,000 \times 12+6000 \times 12+10000 \times 21)$

3. Statement Showing Comparative Profit if all traceable cost of division L is avoidable

|  | Total operation of company if it |  | Benefit or cost to <br> closure $L$ |
| :--- | :---: | :---: | :---: |
|  | Keep Division L | Closure of $\mathbf{L}$ |  |
| Sales | $1,94,000$ | $1,70,000$ | $(24,000)$ |
| Less: Variable Expenses | $1,02,800$ | 88,400 | 14,400 |
| Contribution | 91,200 | 81,600 | $(9,600)$ |
| Less: Total Fixed Cost | 83,200 | 71,000 | 12,200 |
| Profit | 8,000 | 10,600 | 2,600 |

Profit will increase by $₹ 2,600$ closure of division L
Effect of closure with assumption (₹)
Reduction in variable cost $\quad 14,400$
Reduction in FC (12,200-6,100) $\quad \underline{6,100}$
Total Benefits $\quad 20,500$
Reduction in Sales $\quad \underline{24,000}$
Reduction in profit by closure of Div. L 3,500
4.

JTC Ltd.

## Cost Sheet of One Lot of 250 Croquet Mallets

| Computation of Total Cost: | (₹) |
| :--- | ---: |
| Direct Material |  |
| Handles (2.5 feet $\times 250$ units $\times ₹ 50)$ | 31,250 |

PAPER - 5 : ADVANCED MANAGEMENT ACCOUNTING

| Heads ( $1.20 \times 250 \times 0.40 \times$ ₹ 60 ) [W.N.-1] | 7,200 |
| :---: | :---: |
| Less: Scrap Recovery (4\% $\times 50 \times$ ₹ 10 ) | (20) |
| Direct Labour (8Hrs $\times$ ₹ $6 \times 250 / 120$ [W.N.-2] | 100 |
| Prime Cost | 38,530 |
| Factory \& Other Overheads |  |
| Variable, Finishing \& Painting ( $20,000 \times 250 / 20,000)$ [W.N.-3] | 250 |
| Fixed ( $₹ 72,000 \times 250 / 18,000$ ) [W.N.-4] | 1,000 |
| Total Cost | 39,780 |
| Price Quotation: | (₹) |
| Cost per mallet (₹ 39,780 / 250 Units) | 159.12 |
| Add: Profit (50\% on Cost) | 79.56 |
| Selling Price | 238.68 |

## Working Notes

1. Since $20 \%$ of completed heads are spoiled, output of 1 unit requires input of 1.20 units ( $1+0.20$ ); so, total heads processed, $300(1.20 \times 250)$, of which spoiled heads are 50 .
2. Total Time in a day

$$
(8 \times 60)
$$

480 minutes
Less: Idle Time
Coffee Break 48 minutes Instructions 15 minutes 9 minutes
Training 8 minutes 80 minutes Productive Time per day: 400 minutes
Therefore, mallets to be produced per man per day, 120 units ( $400 / 40 \times 12$ ).
Since mallets are produced at the rate of 120 mallets per man day, so total monthly production will be 18,000 mallets ( 120 units $\times 6$ men $\times 25$ days).
3. Finishing and painting overheads are assumed to be variable for the production of 20,000 mallets.
4. All the other expenses are fixed and are to be absorbed by 18,000 ( 120 units $\times 6$ men $\times 25$ Days) mallets of monthly production.
5. Return of $12 \%$ Net (after tax of $40 \%$ ) on Capital Employed is equivalent to $20 \%$ (Gross) [ $12 \% \div(1-0.4)$ ] on Capital Employed.
Let Selling Price per unit to be ' $K$ '

Since Total Sales $=$ Total Cost + Profit

$$
80,000 \mathrm{~K}=14,60,000+20 \%(12,00,000+0.5 \times 80,000 \mathrm{~K})
$$

Or, $\quad 80,000 \mathrm{~K}=14,60,000+2,40,000+8,000 \mathrm{~K}$
Or, $\quad 72,000 \mathrm{~K}=17,00,000$
Or, $K$ ' $=\frac{17,00,000}{72,000}$

$$
=₹ 23.61
$$

Hence Selling Price per unit will be ₹23.61.
6. (i) Efficiency Ratio $=\frac{\text { Standard Hours (for actual production) }}{\text { Actual Hours (worked) }} \times 100$

$$
\begin{aligned}
& =\frac{450 \text { units } \times 10 \text { hrs. }}{6,000 \text { hrs. }} \times 100 \\
& =75 \%
\end{aligned}
$$

(ii) Activity Ratio $=\frac{\text { Standard Hours (for actual production) }}{\text { Budgeted Hours }} \times 100$

$$
\begin{aligned}
& =\frac{450 \text { units } \times 10 \mathrm{hrs} .}{528 \text { units } \times 10 \mathrm{hrs} .} \times 100 \\
& =85.23 \%
\end{aligned}
$$

(iii) Capacity Ratio $=\frac{\text { Actual Hours (worked) }}{\text { Budgeted Hours }} \times 100$

$$
\begin{aligned}
& =\frac{6,000 \text { hrs. }}{528 \text { units } \times 10 \text { hrs. }} \times 100 \\
& =113.64 \%
\end{aligned}
$$

7. Statement Showing Customer Profitability Analysis

| Particulars | Customers X <br> (Retailer) | Customer Y <br> (Wholesaler) | Customers Z <br> (Wholesaler) |
| :--- | :---: | :---: | :---: |
| Gross Revenue | $1,50,000$ | $25,50,000$ | $12,00,000$ |
| Discount Allowed | 7,500 | $3,18,750$ | $1,44,000$ |
| Net Revenue | $1,42,500$ | $22,31,250$ | $10,56,000$ |
| Variable Costs | $1,25,000$ | $21,25,000$ | $10,00,000$ |

| Contribution | 17,500 | $1,06,250$ | 56,000 |
| :--- | :---: | :---: | :---: |
| Order processing cost | 2,400 | 7,200 | 1,800 |
| Regular Deliveries | 1,000 | 0 | 750 |
| Expedited Deliveries | 1,500 | 0 | 1,500 |
| Net Profit | $₹ 12,600$ | $₹ 99,050$ | $₹ 51,950$ |
| Profit Margin (\%) | $8.4 \%$ | $3.88 \%$ | $4.33 \%$ |

Extra discount $0.5 \%$ of $25,50,000=₹ 12,750$. B is the customer with highest order value. If $Y$ required 15 expediated deliveries. It would cost the company $₹ 11,250$. The discount is only marginally higher while also avoiding the risk of delay and consequent displeasure. Hence, it is justified.
8. Let the firm produced x boxes of Cake $\mathrm{X}, \mathrm{y}$ boxes of Cake Y and z boxes of Cake Z .

The profit per box of Cake $X, B$ and $Z$ is $1,000,800$ and 600 respectively. Since objective of the firm is to maximize the profit, therefore, the objective function is given by
Maximize
$Z=1,000 x+800 y+600 z$
Condition-1:
The firm uses two raw materials cream and flour of which 7,000 and 9,000 units respective are available. As per the given data, the raw material constraints can be formulated as given below:
$3 x+4 y+5 z \leq 7,000$ and
$5 x+3 y+5 z \leq 9,000$ and
Condition-2;
The labour time for each box of Cake X is thrice that of cake Y and Six times that Cake $Z$. Also, the labour force can produce the equivalent of 5,000 boxes of Cakes.
$x+y / 3+z / 6 \leq 5,000$ Or
$6 x+2 y+z \leq 30,000$
Condition-3:
The minimum demand of the three cakes is 800,950 and 900 boxes respectively.
Hence,
$x \geq 800$,
$y \geq 950$,
$z \geq 900$,
Condition-4:
Since the ratios of the number of boxes produced of $A \& B$ must be equal to $2: 3$, therefore
$1 / 2 x=1 / 3 y$
$3 x=2 y$
9. Dummy machine $\left(X_{5}\right)$ is inserted to make it a balanced cost matrix and assume its installation cost to be zero. Cost of install at cell $X_{3}(P)$ and $X_{2}(R)$ is very high marked as M.

|  | $\mathbf{P}$ | $\mathbf{Q}$ | $\mathbf{R}$ | $\mathbf{S}$ | $\mathbf{T}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{X}_{\mathbf{1}}$ | 9 | 11 | 15 | 10 | 11 |
| $\mathbf{X}_{\mathbf{2}}$ | 12 | 9 | $\mathbf{M}$ | 10 | 9 |
| $\mathbf{X}_{3}$ | M | 11 | 14 | 11 | 7 |
| $\mathbf{X}_{4}$ | 14 | 8 | 12 | 7 | 8 |
| $\mathbf{X}_{\mathbf{5}}$ (Dummy) | 0 | 0 | 0 | 0 | 0 |

## Step 1

Subtract the minimum element of each row from each element of that row-

|  | $\mathbf{P}$ | $\mathbf{Q}$ | $\mathbf{R}$ | $\mathbf{S}$ | $\mathbf{T}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{X}_{1}$ | 0 | 2 | 6 | 1 | 2 |
| $\mathbf{X}_{2}$ | 3 | 0 | $\mathbf{M}$ | 1 | 0 |
| $\mathbf{X}_{3}$ | $\mathbf{M}$ | 4 | 7 | 4 | 0 |
| $\mathbf{X}_{4}$ | 7 | 1 | 5 | 0 | 1 |
| $\mathbf{X}_{5}$ (Dummy) | 0 | 0 | 0 | 0 | 0 |

## Step 2

Subtract the minimum element of each column from each element of that column-

|  | $\mathbf{P}$ | $\mathbf{Q}$ | $\mathbf{R}$ | $\mathbf{S}$ | $\mathbf{T}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{X}_{1}$ | 0 | 2 | 6 | 1 | 2 |
| $\mathbf{X}_{2}$ | 3 | 0 | $\mathbf{M}$ | 1 | 0 |
| $\mathbf{X}_{3}$ | $\mathbf{M}$ | 4 | 7 | 4 | 0 |

| $\mathbf{X}_{4}$ | 7 | 1 | 5 | 0 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{X}_{5}$ (Dummy) | 0 | 0 | 0 | 0 | 0 |

## Step 3

Draw lines to connect the zeros as under-

|  | P | Q | R | S | T |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{X}_{1}$ | 0 | 2 | 6 | 1 | 2 |  |
| $\mathrm{X}_{2}$ | 3 | 0 | M | , | 0 |  |
| $\chi_{3}$ | M | 4 | 7 | 4 | p |  |
| $\mathrm{X}_{4}$ | 7 | 1 | 5 | 0 | 1 |  |
| $\mathrm{X}_{5}$ (Dummy) |  | 0 | 0 | 4 |  | - |

There are five lines which are equal to the order of the matrix. Hence the solution is optimal. We may proceed to make the assignment as under-

|  | $\mathbf{P}$ | $\mathbf{Q}$ | $\mathbf{R}$ | $\mathbf{S}$ | $\mathbf{T}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{X}_{1}$ | 0 | 2 | 6 | 1 | 2 |
| $\mathbf{X}_{2}$ | 3 | 0 | M | 1 | $>\ll$ |
| $\mathrm{X}_{3}$ | M | 4 | 7 | 4 | 0 |
| $\mathrm{X}_{4}$ | 7 | 1 | 5 | 0 | 1 |
| $\mathbf{X}_{5}$ (Dummy) | $>\ll$ | $>\ll$ | 0 | $>\ll$ | $><$ |

The following is the assignment which keeps the total cost at minimum-

| Machines | Location | Costs (₹) |
| :---: | :---: | :---: |
| $\mathrm{X}_{1}$ | P | 9 |
| $\mathrm{X}_{2}$ | Q | 9 |
| $\mathrm{X}_{3}$ | T | 7 |
| $\mathrm{X}_{4}$ | S | 7 |
| $\mathrm{X}_{5}$ (Dummy) | R | 0 |
|  | Total | 32 |

10. (i) The Network for the given problem:

(ii) Critical Path: 1-2-3-4-5 (A-C-E-F).
(iii) Total Float and Free Float for each activity:

| $\frac{\overrightarrow{3}}{\vec{y}}$ |  | EST | EFT | LST | LFT | Slack of <br> Tail <br> Event | Slack of Head <br> Event | Total <br> Float | Free Float |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{Dij}^{\text {i }}$ | $\mathrm{E}_{\mathrm{i}}$ | $\begin{gathered} \mathrm{E}_{\mathrm{i}} \\ + \\ \mathrm{D}_{\mathrm{ij}} \end{gathered}$ | $\begin{gathered} \mathrm{L}_{\mathrm{j}} \\ - \\ \mathrm{D}_{\mathrm{ij}} \end{gathered}$ | $\mathrm{L}_{\mathrm{j}}$ | Ei | $\begin{gathered} L_{j} \\ - \\ E_{j} \end{gathered}$ | $\begin{array}{\|c\|} \hline \text { LST } \\ - \\ \text { EST } \end{array}$ | Total Float <br> Slack of Head Event |
| $\begin{gathered} \hline \text { A } \\ (1-2) \end{gathered}$ | 16 | 0 | 16 | 0 | 16 | 0 | 0 | 0 | 0 |
| $\begin{gathered} \mathrm{B} \\ (1-3) \end{gathered}$ | 20 | 0 | 20 | 4 | 24 | 0 | 0 | 4 | 4 |
| $\begin{gathered} \text { C } \\ (2-3) \end{gathered}$ | 8 | 16 | 24 | 16 | 24 | 0 | 0 | 0 | 0 |
| $\begin{gathered} D \\ (2-4) \end{gathered}$ | 10 | 16 | 26 | 20 | 30 | 0 | 0 | 4 | 4 |
| $\begin{gathered} E \\ (3-4) \end{gathered}$ | 6 | 24 | 30 | 24 | 30 | 0 | 0 | 0 | 0 |
| $\begin{gathered} \text { F } \\ (4-5) \end{gathered}$ | 12 | 30 | 42 | 30 | 42 | 0 | 0 | 0 | 0 |

11. Allocation of Random Numbers

| Raw Material |  |  | Wages \& Other Variable Overheads |  |  | Sales |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mid <br> Point | Cum. <br> Prob. | Random <br> Nos. | Mid <br> Point | Cum. <br> Prob. | Random Nos. | Mid <br> Point | Cum. Prob. | Rando m Nos. |
| 9 | 0.2 | 0-1 | 12 | 0.3 | 0-2 | 36 | 0.1 | 0 |
| 11 | 0.5 | 2-4 | 14 | 0.8 | 3-7 | 40 | 0.4 | 1-3 |
| 13 | 0.8 | 5-7 | 16 | 1.0 | 8-9 | 44 | 0.8 | 4-7 |
| 15 | 1.0 | 8-9 |  |  |  | 48 | 1.0 | 8-9 |

Simulation Table
(₹ in 000)

| Month | Raw <br> Material |  <br> Other V.O | Sales | Fixed <br> Cost | Net Cash <br> Flow | Cash Balancing <br> (Opening ₹40 <br> thousand) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 11 | 12 | 36 | 15 | -2 | 38 |
| 2 | 11 | 14 | 44 | 15 | +4 | 42 |
| 3 | 9 | 16 | 44 | 15 | +4 | 46 |
| 4 | 9 | 12 | 36 | 15 | 0 | 46 |
| 5 | 11 | 16 | 40 | 15 | -2 | 44 |
| 6 | 13 | 16 | 48 | 15 | +4 | 48 |

12. (i)

|  | ₹ $/ \mathbf{u}$ <br> Avg. / unit (4 units) |
| :--- | :---: |
| Variable Cost | 1,000 |
| Labour | 405 |
| Target Contribution | 750 |
| Price to be Quoted | 2,155 |

(ii) No, Corocodile Ltd. cannot quote this price for varying products because the learning curve Ratio does not apply to non-repeated jobs. Each product will carry a different price according to its direct labour hours.
13. Calculation of Total Labour Hours Over the Life Time of The Product 'W-9'

The average time per unit for 250 units

|  | $Y_{x}$ | $=a x^{\text {b }}$ |
| :---: | :---: | :---: |
| Or, | $Y_{250}$ | $=30 \times 250-0.3219$ |
| Or, | $Y_{250}$ | $=30 \times 0.1691$ |
| Or, | $\mathrm{Y}_{250}$ | $=5.073$ hours |
|  | Total time for 250 units | $=5.073 \times 250$ units |
|  |  | $=1,268.25$ hours |

The average time per unit for 249 units

Or,

$$
\begin{aligned}
Y_{249} & =30 \times 249-0.3219 \\
Y_{249} & =30 \times 0.1693 \\
Y_{249} & =5.079 \text { hours } \\
\text { Total time for } 249 \text { units } & =5.079 \times 249 \text { units } \\
& =1,264.67 \text { hours } \\
\text { Time for } 250^{\text {th }} \text { unit } & =1,268.25 \text { hours }-1,264.67 \text { hours } \\
& =3.58 \text { hours } \\
\text { Total Time for } 1,000 \text { units } & =(750 \times 3.58 \text { hours })+1,268.25 \text { hours } \\
& =3,953.25 \text { hours }
\end{aligned}
$$

Profitability of the Product 'W-9'
Sales 1,000 Units

| Particulars | Amount (Rs.) |
| :--- | ---: |
| Sales | $50,00,000$ |
| Less: Direct Material | $18,50,000$ |
| Direct Labour (3,953.25 hours $\times$ Rs. 80) | $3,16,260$ |
| $\quad$ Variable Overheads (1,000 units $\times$ Rs. 1,000 $)$ | $10,00,000$ |
| Contribution | $18,33,740$ |
| Less: Packing Machine Cost | $5,00,000$ |
| Profit | $13,33,740$ |

## Average Target Labour Cost per unit

| Particulars | Amount (Rs.) |
| :--- | ---: |
| Expected Sales Value | $50,00,000$ |
| Less: Desired Profit $(1,000$ units $\times$ Rs. 800$)$ | $8,00,000$ |
| Target Cost | $42,00,000$ |
| Less: Direct Material $(1,000$ units $\times$ Rs. 1,850$)$ | $18,50,000$ |
| Variable Cost $(1,000$ units $\times$ Rs. 1,000$)$ | $10,00,000$ |
| Packing Machine Cost | $5,00,000$ |
| Target Labour Cost | $8,50,000$ |
| Average Target Labour Cost per unit (Rs. $8,50,000 \div 1,000$ units) | 850 |

14. 

|  | Name of the cost | Example | Relevant/ non relevant |
| :--- | :--- | :--- | :--- |
| (i) | Sunk Cost | Written down value of <br> machine already purchased | Not relevant in decision <br> making |
| (ii) | Opportunity Cost | Funds invested in business <br> or deposited into bank | Useful in decision making |
| (iii) | Out of Pocket <br> Costs | Commission to salesman on <br> sales, Carriage inward. | Relevant for decision <br> making |
| (iv) | Differential Cost | Include all fixed and variable <br> cost which are increased/ <br> decreased | Relevant in specific <br> decision making |
| (v) | Notional Cost | Notional Rent for use of <br> space | Relevant if company <br> actually benefit by using <br> resources alternatively |

15. 

| Situation |  | Appropriate Policy | Pricing |
| :---: | :---: | :---: | :---: |
| (i) | 'W' is a new product for the company and the market and meant for large scale production and long term survival in the market. Demand is expected to be elastic. | Penetration Pricing |  |
| (ii) | ' X ' is a new product for the company, but not for the market. X's success is crucial for the company's survival in the long term. | Market Price Just Below Price | or Price Market |

| (iii) | $Y '$ ' is a new product to the company and the market. It has <br> an inelastic market. There needs to be an assured profit to <br> cover high initial costs and the unusual sources of capital <br> have uncertainties blocking them. | Skimming Pricing |
| :--- | :--- | :--- |
| (iv) | 'Z' is a perishable item, with more than $80 \%$ of its shelf life <br> over. | Any Cash Realizable <br> Value* |

(*) $^{*}$ this amount decreases every passing day.
16. (i) New Product tie up --- Innovation / Learning Perspective
(ii) Growth of Volume --- Financial Perspective
(iii) Time for Loan / Fresh Products --- Customer Perspective
