CHAPTER OVERVIEW

1. INTRODUCTION

Investments are assets held by an enterprise for earning income by way of dividends, interest and rentals, for capital appreciation, or for other benefits to the investing enterprise. Investment Accounting is done as per AS 13, Accounting for Investments which deals with accounting for investments in the financial statements and related disclosure requirements except:

- (i) Bases for recognition of interest, dividends and rentals earned on investments;
- (ii) operating or financial leases;
- (iii) investment of retirement benefit plans and life insurance enterprises;
- (iv) mutual funds, etc.

Note: Assets held as Stock-in-trade are not 'Investments'.

2. CLASSIFICATION OF INVESTMENTS

The investments are classified into two categories as per AS 13, viz., Current Investments and Long-term Investments.

2.1 Current Investments

- A current Investment is an investment that is by its nature readily realisable and is intended to be held for not more than one year from the date on which such investment is made.

Example: A Ltd. acquired 1,000 shares of B Ltd. on 1st April, 20X1 with an intention to hold them for a period of 15 months. Suggest the classification of such investment (in accordance with AS 13) as on 31st March, 20X2.

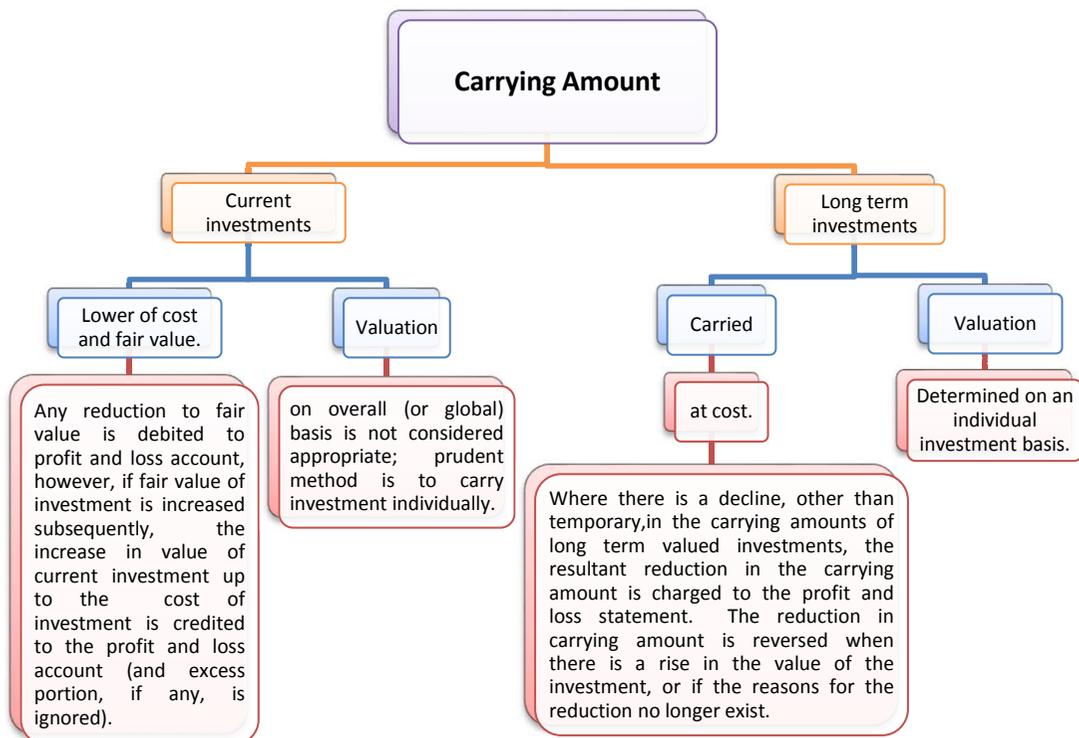

Investment in 1,000 shares is not a current investment because it is intended to be held for more than one year from the investment date even though the remaining period as on the reporting date may be less than one year.

- **The carrying amount** for current investments is the lower of cost and fair value.
- **Fair Value** is the amount for which an asset could be exchanged between a knowledgeable, willing buyer and a knowledgeable, willing seller in an arm's length transaction. Under appropriate circumstances, market value or net realisable value provides an evidence of fair value.

- **Market Value** is the amount obtainable from the sale of an investment in an open market, net of expenses necessarily to be incurred on or before disposal.
- Any reduction to fair value and any reversals of such reductions are included in the statement of profit and loss.

2.2 Long-term Investments

- A long-term investment is an investment other than a current investment.
- Long term investments are usually carried at cost.
- If there is a decline, other than temporary, in the value of a long term investment; the carrying amount is reduced to recognise the decline.
- The reduction in carrying amount is charged to the statement of profit and loss.
- The reduction in carrying amount is reversed when there is a rise in the value of the investment, or if the reasons for the reduction no longer exist.

3. COST OF INVESTMENTS

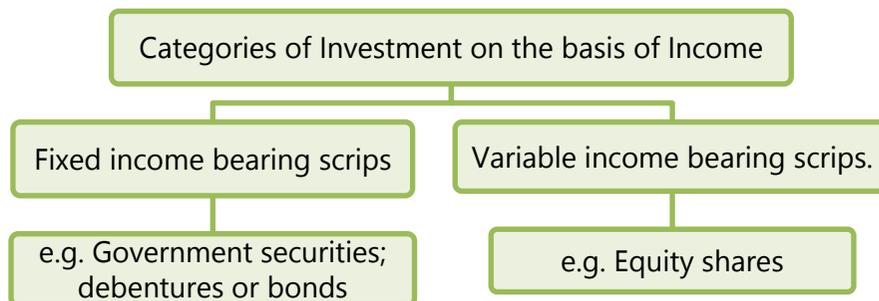

1. The cost of an investment includes acquisition charges such as brokerage, fees and duties.
2. If an investment is acquired, or partly acquired, by the issue of shares or other securities, the acquisition cost is the fair value of the securities issued.

The fair value may not necessarily be equal to the nominal or par value of the securities issued.

If an investment is acquired in exchange, or part exchange, for another asset, the acquisition cost of the investment is determined by reference to the fair value of the asset given up or the fair value of the investment acquired, whichever is more clearly evident.

Type of acquisition	Cost of investments
Cash/ bank	Cash price including charges such as brokerages, fees and duties
Issue of shares/ other securities	Fair value of securities issued
In exchange for another asset	Fair value of asset given up or fair value of investment acquired, whichever is more clearly evident

3. A separate Investment Account should be made for each scrip purchased. The scrips purchased may be broadly divided into two categories, viz.

The entries in Investment Account for these two broad categories of scrips will be made as under:

- (i) **Fixed income Bearing Securities:** These refer to securities having fixed return of income. Investment in Government securities or debentures comes under this category.

Transaction for fixed income bearing securities may occur on following basis:

- (a) Ex-interest basis
- (b) Cum- interest basis

In case the transaction is on 'Ex-interest' basis, the amount of interest accrued to the date of transaction has to be paid in addition to the price of security.

The following entries are made in the books of Purchaser:

Investment Account	Dr.	(With the price settled on ex-interest basis)*
Interest accrued Account	Dr.	(Accrued interest till the date of transaction)**
To Bank A/c		(With total amount paid)

* This amount will appear in Capital Column of 'Investment A/c'.

**This amount will appear in Income Column of 'Investment A/c'.

In case the transaction is on cum-interest basis, a part of purchase price is related to the interest accrued from the date of the last interest paid to the date of transaction. Hence, in this case, the cost of investment has to be calculated by subtracting the amount of accrued interest from the Purchase Price.

The following entries are made in the books of Purchaser:

Investment Account	Dr.	(With the price settled on cum-interest less Interest Accrued)*
Interest accrued Account	Dr.	(Accrued interest till the date of transaction)**
To Bank A/c		(With total amount paid)

* This amount will appear in Capital Column of 'Investment A/c'.

**This amount will appear in Income Column of 'Investment A/c'.

When the interest amount is actually received, it is entered in the Income Column credit side. The net effect of these entries will be that the amount credited to the income will be only the interest arising between the date of purchase and the one on which it next falls due.

Note:

- (a) Interest amount is always calculated with respect to nominal value (par value/ nominal value).
- (b) In case the quotation does not specify whether it is ex-interest or cum-interest, the same will be treated as ex-interest quotation as per the general practice
- (ii) **Variable Income Bearing Securities:** These refer to securities having variable return of income. Investment in equity shares comes under this category. The following points should be noted with respect to investment in equity shares:
- (a) dividends from investments in shares are not recognised in the statement of profit and loss until a right to receive payment is established;
- (b) the amount of dividend accruing between the date of last dividend payment and the date of purchase cannot be immediately ascertained.

In the following way the information is incorporated in the books of investor at the time of purchase:

Investment Account To Bank A/c	Dr.	(With the entire purchase price)* (With total amount paid)
-----------------------------------	-----	---

* This amount will appear in Capital Column of 'Investment A/c'.

The adjustment with respect to dividend is made when the dividend is actually received as under:

Bank A/c To Investment A/c To Dividend A/c	Dr.	(with total dividend received) with the amount of dividend for the period for which the investor did not hold the share)* (with the amount of dividend for the post – acquisition period)**
--	-----	---

*This amount will appear in Capital Column of 'Investment A/c'.

**This amount will appear in Income Column of 'Investment A/c'.

- The important point with respect to investment in equity shares is that the amount of dividends for the period, for which the shares were not held by the investor, should not be treated as revenue receipt but they should be treated as capital receipt, i.e., when dividends on equity shares are declared from pre-acquisition profits, the amount of such dividend received by the investor is entered on the credit side in the capital column, so as to reduce the acquisition cost.
 - If it is difficult to make an allocation between pre and post-acquisition periods except on an arbitrary basis, the cost of investment is normally reduced by dividends receivable, only if they clearly represent recovery of part of the cost.
4. When right shares offered are subscribed for, the cost of the right shares is added to the carrying amount of the original holding.

If rights are not subscribed for but are sold in the market, the sale proceeds are taken to the statement of profit and loss.

Right shares	Accounting
When right shares offered are subscribed	Cost of right shares should be added to carrying amount of the original holding.
If rights are not subscribed for but are sold	Sale proceeds should be taken to statement of profit and loss (refer note below for an exception).

Note: Where the investments are acquired on cum-right basis and the market value of investments immediately after their becoming ex-right is lower than the cost for which they were acquired, it may be appropriate to apply the sale proceeds of rights to reduce the carrying amount of such investments to the market value.

For e.g., Mr. X acquires 200 shares of a company on cum-right basis for ₹ 50,000. He subsequently receives an offer of right to acquire fresh shares in the company in the proportion of 1:1 at ₹ 110 each. X subscribes for the right issue. Thus, the total cost of X's holding of 400 shares would amount to ₹ 72,000 (50,000 + 22,000).

Suppose, he does not subscribe but sells the rights for ₹ 15,000. The ex-right market value of 200 shares bought by X immediately after the rights falls to

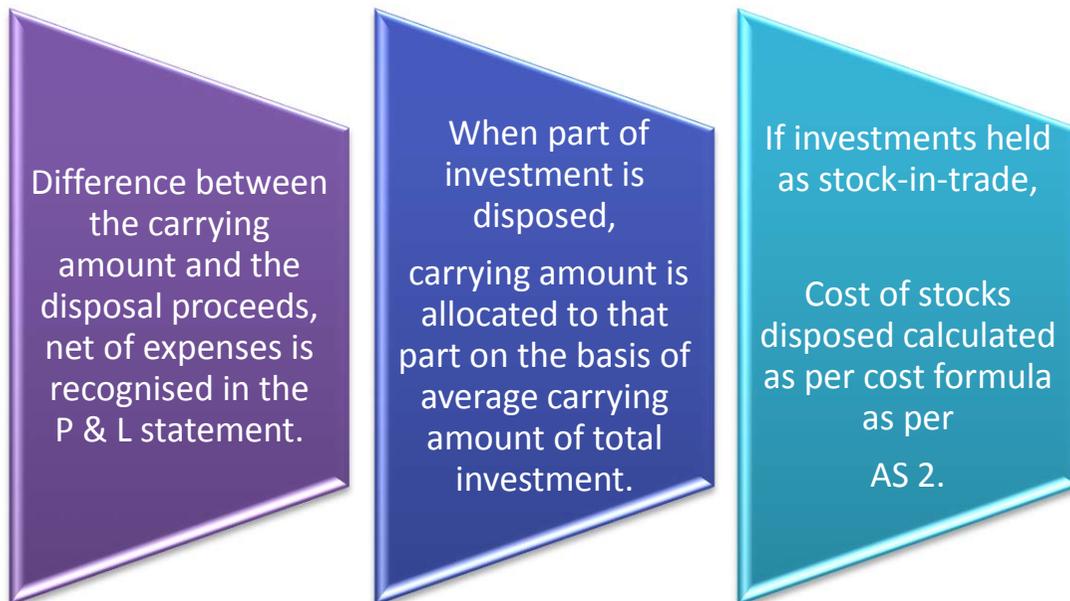

₹ 40,000. In this case out of sale proceeds of ₹ 15,000, ₹ 10,000 may be applied to reduce the carrying amount to the market value ₹ 40,000 and ₹ 5,000 would be credited to the profit and loss account.

5. Where an investment is acquired by way of issue of bonus shares, no amount is entered in the capital column of investment account since the investor has not paid anything.

4. DISPOSAL OF INVESTMENTS

- On disposal of an investment, the difference between the carrying amount and the disposal proceeds, net of expenses is recognised in the profit and loss statement.
- When a part of the holding of an individual investment is disposed, the carrying amount is required to be allocated to that part on the basis of the average carrying amount of the total holding of the investment.
- In respect of shares, debentures and other securities held as stock-in-trade, the cost of stocks disposed of may be determined by applying an appropriate cost formula (*e.g.*, first-in, first-out (FIFO), average cost, etc.). These cost formulae are the same as those specified in AS 2, *Valuation of Inventories*.

- (i) **Fixed Income Bearing Securities:** In case the transaction is on 'Cum-interest basis', the amount of accrued interest from the date of last payment to the date of sale is credited in the income column and only the sale proceeds, net of accrued interest (from the date of last payment to the date of sale), is credited in the capital column of investment account.

In case the transaction is on 'Ex-interest' basis, entire sale proceeds is credited in the capital column and the amount of accrued interest from the date of last payment to the date of sale, separately received from the buyer will be taken to the credit side of the income column of investment account.

- (ii) **Variable Income Bearing Securities:** In case of these securities, the entire amount of sale proceeds should be credited in the capital column of investment account, unless the amount of accrued dividend can be specifically established.

The entries in the books at the time of sale of investments will be just the reverse of the entries passed for their acquisition.

Particulars	Value in 'capital' column of investment	
	Purchase	Sale
Transaction on ex-interest basis	Purchase price of investment, i.e., no impact of interest accrued upto the date of transaction	Entire sale proceeds from investments, i.e., no impact of accrued interest (from the date of last payment to the date of sale)
Transaction on cum-interest basis	Purchase price of investment less accrued interest upto the date of transaction	Sale proceeds, net of accrued interest (from the date of last payment to the date of sale)

Before and after the record date of bonus shares, the shares were quoted at ₹ 175 per share and ₹ 90 per share respectively. On 31.3.20X2, Mr. Krishna Murty sold bonus shares to a Broker, who charged 2% brokerage.

Working Notes:

- Cost of equity shares purchased on 1.4.20X1 = $(1,000 \times ₹ 120) + (2\% \text{ of } ₹ 1,20,000) + (\frac{1}{2}\% \text{ of } ₹ 1,20,000) = ₹ 1,23,000$
- Sale proceeds of equity shares (bonus) sold on 31st March, 20X2 = $(500 \times ₹ 90) - (2\% \text{ of } ₹ 45,000) = ₹ 44,100$.
- Profit on sale of bonus shares on 31st March, 20X2
 $= \text{Sale proceeds} - \text{Average cost}$
 Sale proceeds = ₹ 44,100
 Average cost = $₹ (1,23,000 / 1,50,000) \times 50,000 = ₹ 41,000$
 Profit = $₹ 44,100 - ₹ 41,000 = ₹ 3,100$.
- Valuation of equity shares on 31st March, 20X2
 Cost = $(₹ 1,23,000 / 1,50,000) \times 1,00,000 = ₹ 82,000$
 Market Value = $1,000 \text{ shares} \times ₹ 90 = ₹ 90,000$
 Closing balance has been valued at ₹ 82,000 being lower than the market value.
- Bonus shares do not have any cost.

Mr. X purchased 500 equity shares of ₹ 100 each in Omega Co. Ltd. for ₹ 62,500 inclusive of brokerage and stamp duty. Some years later the company resolved to capitalise its profits and to issue to the holders of equity shares, one equity bonus share for every share held by them. Prior to capitalisation, the shares of Omega Co. Ltd. were quoted at ₹ 175 per share. After the capitalisation, the shares were quoted at ₹ 92.50 per share. 	1,00,000	76,250		1,00,000	76,250
To Balance b/d	50,000	31,250			

Working Notes:

- Bonus shares do not have any cost.
- Profit on sale of bonus shares = Sales proceeds – Average cost

$$\text{Sales proceeds} = ₹ 45,000$$

$$\text{Average cost} = \frac{500}{1,000} \times 62,500 = ₹ 31,250$$

$$\text{Profit} = ₹ 45,000 - ₹ 31,250 = ₹ 13,750.$$

- Valuation of Closing Balance of Shares at the end of year

The total cost of 1,000 share including bonus is ₹ 62,500

$$\text{Therefore, cost of 500 shares (carried forward) is } \frac{500}{1,000} \times 62,500 = ₹ 31,250$$

Market price of 500 shares = $92.50 \times 500 = ₹ 46,250$

Cost being lower than the market price, therefore shares are carried forward at cost.

= $(5,000 \times ₹ 120) + (2\% \text{ of } ₹ 6,00,000) + (\frac{1}{2}\% \text{ of } ₹ 6,00,000)$
= ₹ 6,15,000

2. Sale proceeds of equity shares sold on 31st March, 20X2

= Sale price – Brokerage

= (2,500 × ₹ 90) – (2% of ₹ 2,25,000)

= ₹ 2,20,500

3. Profit on sale of bonus shares

= Sales proceeds – Average cost

Sales proceeds = ₹ 2,20,500

Average cost = ₹ (6,15,000 / 7,50,000) × 2,50,000 = ₹ 2,05,000

Profit = ₹ 2,20,500 – ₹ 2,05,000 = ₹ 15,500.

4. Valuation of equity shares on 31st March, 20X2

Cost = ₹ [6,15,000 × 5,00,000 / 7,50,000] = ₹ 4,10,000, i.e., ₹ 82 per share

Market Value = 5,000 shares × ₹ 90 = ₹ 4,50,000

Closing stock of equity shares has been valued at ₹ 4,10,000 i.e. cost being lower than the market value.

 Amount paid for subscription of right shares = $10,000 \times 15 = ₹ 1,50,000$
- (4) **Dividend received** = $25,000$ (shares as on 1st April 20X1) $\times 10 \times 20\% = ₹ 50,000$
 Dividend on shares purchased on 20.6.20X1 = $5,000 \times 10 \times 20\% = ₹ 10,000$ is adjusted to Investment A/c
- (5) **Profit on sale of 25,000 shares**
 = Sales proceeds – Average cost
 Sales proceeds = ₹ 3,75,000
 Average cost = $\frac{(3,75,000 + 80,000 + 1,50,000 - 10,000)}{45,000} \times 25,000 = ₹ 3,30,556$
 Profit = ₹ 3,75,000 – ₹ 3,30,556 = ₹ 44,444.
- (6) **Cost of shares on 31.12.20X1**
 $\frac{(3,75,000 + 80,000 + 1,50,000 - 10,000)}{45,000} \times 20,000 = ₹ 2,64,444$

Working Notes:**1. Right shares**

No. of right shares issued = $(20,000 + 5,000 + 5,000) / 3 = 10,000$ shares

No. of right shares subscribed = $10,000 \times 50\% = 5,000$ shares

Amount of right shares issued = $5,000 \times 15 = ₹ 75,000$

No. of right shares sold = $10,000 - 5,000 = 5,000$ shares

Sale of right shares = $5,000 \times 1.5 = ₹ 7,500$ to be credited to statement of profit and loss

2. Cost of shares sold — Amount paid for 35,000 shares

	₹
(₹3,20,000 + ₹ 70,000 + ₹ 75,000)	4,65,000
Less: Dividend on shares purchased on June 1 (since the dividend pertains to the year ended 31 st March, 20x1, i.e., the pre-acquisition period)	(7,500)
Cost of 35,000 shares	4,57,500
Cost of 20,000 shares (Average cost basis)	2,61,429
Sale proceeds	2,60,000
Loss on sale	1,429

3. Value of investment at the end of the year

Assuming investment as current investment, closing balance will be valued based on lower of cost or net realisable value.

Here, Net realisable value is ₹14 per share i.e. 15,000 shares x ₹ 14 = ₹ 2,10,000 and cost = $\frac{4,57,500}{35,000} \times 15,000 = ₹ 1,96,071$. Therefore, value of investment at the end of the year will be ₹ 1,96,071.

		2,50,000	2,25,000	45,00,000			2,50,000	2,25,000	45,00,000

Working Notes:

1. **Cost of investment purchased on 1st April, 20X1**

12,000, 8% bonds were purchased @ ₹ 80.50 cum-interest. Total amount paid 12,000 bonds x ₹ 80.50 = 9,66,000 which includes accrued interest for 5 months, i.e., 1st November, 20XX to 31st March, 20X1. Accrued interest will be ₹ 12,00,000 x 8/100 x 5/12 = ₹ 40,000. Therefore, cost of investment purchased

$$= ₹ 9,66,000 - 40,000 = ₹ 9,26,000.$$

Note: It has been assumed that the nominal value of a bond is ₹ 100.

2. **Sale of bonds on 1st October, 20X1**

3,000 bonds were sold @ ₹ 81 ex-interest, i.e., Total amount received = 3,000 x 81 + accrued interest for 5 months = ₹ 2,43,000 + ₹ 10,000 (3,00,000 x 8/100 x 5/12)

3. **Interest received on 1st November, 20X1**

Interest will be received for 9,000 bonds @ 8% for 6 months, i.e., ₹ 9,00,000 x 8/100 x 1/2 = ₹ 36,000.

4. **Cost of bonds on 31.3.20X1**

Cost of bonds on 31.3.20X1 will be ₹ 9,26,000 / 12,000 x 9,000 = ₹ 6,94,500.

Interest accrued on bonds on 31.3.20X1 = 9,00,000 x 8% x 5/12 = ₹ 30,000

5. **Profit on sale of bonus shares**

Cost per share after bonus = ₹ 40,00,000 / 2,50,000 = ₹ 16 (average cost method being followed)

Profit per share sold (₹ 20 - ₹ 16) = ₹ 4.

Therefore, total profit on sale of 1,25,000 shares = ₹ 4 x 1,25,000 = ₹ 5,00,000.

6. **Profit on sale of bonds**

	₹
Sale value	= 2,43,000
Cost of ₹ 3,00,000 8% bonds = 9,26,000 / 12,00,000 x 3,00,000	= <u>2,31,500</u>
Profit	= <u>11,500</u>

7. Dividend on equity shares = 1,25,000 x 10 x 18% = ₹ 2,25,000

8. **Value of equity shares at end of year**

Cost per share after bonus = ₹ 16

Number of shares = 1,25,000

Value of equity shares at end of year = 1,25,000 x 16 = ₹ 20,00,000

Theoretical Questions

1. The investments are classified into two categories as per AS 13, viz., Current Investments and Long-term Investments. A current Investment is an investment that is by its nature readily realisable and is intended to be held for not more than one year from the date on which such investment is made. The carrying amount for current investments is the lower of cost and fair value. Any reduction to fair value and any reversals of such reductions are included in the statement of profit and loss. A long-term investment is an investment other than a current

investment. Long term investments are usually carried at cost. However, when there is a decline, other than temporary, in the value of a long term investment, the carrying amount is reduced to recognise the decline. The reduction in carrying amount is charged to the statement of profit and loss.

- The accounting treatment 'at cost' under the head 'Long Term Investment' in the financial statements of the company without providing for any diminution in value is correct and is in accordance with the provisions of AS 13 provided that there is no decline, other than temporary, in the value of investment. If the decline in the value of investment is, other than temporary, compared to the time when the shares were purchased, provision is required to be made.

Practical Questions

Answer 1

As per AS 13, where the investments are acquired on cum-right basis and the market value of investments immediately after their becoming ex-right is lower than the cost for which they were acquired, it may be appropriate to apply the sale proceeds of rights to reduce the carrying amount of such investments to the market value. In this case, the amount of the ex-right market value of 200 shares bought by X immediately after the declaration of rights falls to ₹60,000. In this case, out of sale proceeds of ₹ 12,000, ₹ 10,000 may be applied to reduce the carrying amount to bring it to the market value and ₹ 2,000 would be credited to the profit and loss account.

1. **Calculation of no. of bonus shares issued**

$$\text{Bonus Shares} = \frac{15,000 \text{ shares} + 5,000 \text{ shares}}{5} \times 1 = 4,000 \text{ shares}$$

2. **Calculation of right shares subscribed**

$$\text{Right Shares} = \frac{15,000 \text{ shares} + 5,000 \text{ shares} + 4,000 \text{ shares}}{6} = 4,000 \text{ shares}$$

$$\text{Shares subscribed by XY Ltd.} = \frac{4,000}{2} = 2,000 \text{ shares}$$

$$\text{Value of right shares subscribed} = 2,000 \text{ shares} @ ₹ 12 \text{ per share} = ₹ 24,000$$

3. **Calculation of sale of right entitlement**

$$2,000 \text{ shares} \times ₹ 8 \text{ per share} = ₹ 16,000$$

Amount received from sale of rights will be credited to statement of profit and loss.

4. **Calculation of profit on sale of shares**

Total holding	=	15,000 shares	original
		5,000 shares	purchased
		4,000 shares	bonus

i.e. 13,000 shares (26,000 x 1/2) were sold.

Cost of total holdings of 26,000 shares (on average basis)

$$= ₹ 2,25,000 + ₹ 1,00,000 + ₹ 24,000 - ₹ 10,000$$

$$= ₹ 3,39,000$$

Average cost of 13,000 shares would be

Note: It is presumed that no dividend is received on bonus shares as bonus shares are declared on 1st July, 20X1 and dividend pertains to the year ended 31.3.20X1.

6. **Calculation of closing value of shares (on average basis) as on 31st March, 20X2**

						<u>50,000</u>	<u>7,12,000</u>

Working Notes:

- (1) **Bonus Shares** = $(30,000 + 5,000) / 7 = 5,000$ shares
- (2) **Right Shares** = $\frac{(30,000 + 5,000 + 5,000)}{8} \times 3 = 15,000$ shares
- (3) **Rights shares sold** = $15,000 \times 1/3 = 5,000$ shares
- (4) **Dividend received** = $30,000 \times 10 \times 20\% = ₹ 60,000$ will be taken to P&L statement
- (5) **Dividend on shares purchased on 22.6.20X1** = $5,000 \times 10 \times 20\% = ₹ 10,000$ is adjusted to Investment A/c
- (6) **Profit on sale of 20,000 shares**
 = Sales proceeds – Average cost
 Sales proceeds = ₹ 3,00,000
 Average cost = $\frac{(4,50,000 + 80,000 + 1,50,000 - 10,000)}{50,000} \times 20,000 = ₹ 2,68,000$
 Profit = ₹ 3,00,000 – ₹ 2,68,000 = ₹ 32,000.
- (7) **Cost of shares on 31.3.20X2**
 $\frac{(4,50,000 + 80,000 + 1,50,000 - 10,000)}{50,000} \times 30,000 = ₹ 4,02,000$
- (8) Sale of rights amounting ₹ 10,000 (₹ 2 x 5,000 shares) will not be shown in investment A/c but will directly be taken to P & L statement.
